

dr hab.
**Aleksandra
Mironczuk**

Type of tutoring:

scientific and developmental

Language of tutoring:

Polish, English

E-mail: aleksandra.mironczuk@upwr.edu.pl

Due to the Tutor's long-term intership, meetings are held online.

I graduated from University of Wroclaw (Biology) and I had done my PhD in the Department of Molecular Genetics at the University of Groningen, the Netherlands. Currently I work in the Laboratory for Biosustainability, at Institute of Environmental Biology. I work in molecular biology field, modifying microorganisms for people. Currently, I focus on the plastics biodegradation by the genetically modified microorganisms. I wonder who will be the first to clean up the littered world, people or the nature? Who will be wiser in this game, us or microorganisms?

Science experience

So far, I am/was Principle Investigator of three research projects (NCBiR, NCN), and due to my long-term international experience (e.g. Stanford University, USA; DTU, Denmark ; Catalan Institute for Water Research, Spain) I had the opportunity to learn many ways of working and solving problems, not only scientific ones.

Maybe tutoring?

If you are interested in a discussion on topics that intrigue you, you are looking for answers and think about seemingly impossible things, I invite you to a discussion.

Why Tutoring?

Each of us has a talent that we should allow to develop. I can get the best out of people.
