Zatoń-Dobrowolska

Type of tutoring:

scientific and developmental

Language of tutoring:

Polish, English

E-mail: [magdalena.zaton-dobrowolska@upwr.edu.pl](mailto:magdalenazaton-dobrowolska@upwr.edu.pl)

I am researcher and academic teacher at the Department of Genetics UPWr. Scientifically, I deal with animal genetics, especially in the population aspect. In addition, I am also fascinated by cynology and felinology, i.e. everything related to dogs and cats, why they are what they are, as well as broadly understood behavior. Recently, my passion has also become geometric morphometry.

In science and life, I love discovering, especially unobvious things, combining many facts that at first glance seem completely unrelated to each other. I like contact with students because I feel that I can share my knowledge, experience and help with others by pointing out different ways and different possibilities. On the other hand, I get to know the perspective of other young people on a given issue, which can sometimes be surprising and extremely interesting. Privately, I am a lover of mountains, nature, music and books in the style of Agata Christie.
