

dr inż.
**Aleksandra
Bawiec**

Type of tutoring:

scientific and developmental

Language of tutoring:

Polish, English

E-mail: aleksandra.bawiec@upwr.edu.pl

My scientific interests focus on topics related to wastewater treatment. A "stinking" challenge and a rather endless story, but I assure you that it is extremely interesting! I am a graduate not only of environmental engineering at the Wrocław University of Science and Technology, but above all of environmental protection studies at UPWr, and as an elderly professor once said, "Mrs. Ola, you are more of a naturalist than an engineer." After the first moments of indignation, I concluded that this was the case, which is why in my research I focus on the possibility of using processes that naturally occur in nature to achieve the requirements for technological solutions for wastewater treatment. I defended my PhD in 2019, so I think I still remember quite well what it's like to be a PhD student and I will be happy to share my observations and advice with you.

Privately, I am crazy about my French bulldogs, books (mainly psychological), animated films and travel, which I will be happy to talk to you about if you decide to meet me.
